CSS UNITS

✅ **1. clamp()**

```
font-size: clamp(1rem, 2vw, 2rem);
```
📎 Use for responsive font sizes — set min, preferred, and max.

✅ **2. fr**

```
grid-template-columns: 1fr 2fr;
```
📎 Defines fractions in CSS Grid — no need to calculate widths.

✅ **3. %**

```
width: 80%;
```
📎 Based on parent element — great for flexible layouts.

✅ **4. ch**

```
width: 60ch;
```
📎 Width based on character count — perfect for readable text blocks.

✅ **5. vh / vw**

```
height: 100vh;
```
📎 Viewport height/width ideal for full-screen hero sections.

✅ **6. em**

```
padding: 2em;
```
📎 Relative to the element's font size great for spacing.

✅ **7. rem**

```
margin: 1.5rem;
```
📎 Relative to the root font size consistent across components.
